```

The diagram illustrates the request flow for two different resources. For the first request, 'get home.html', the client (IP 212) sends the request to the Gateway (IP 246). The Gateway then sends the request to the Compiled Object Cache (IP 1410). The Cache returns the response 'home.html' to the Gateway, which then forwards it to the client. For the second request, 'get mpeg/logo.gif', the client sends the request to the Gateway. The Gateway sends the request to the Compiled Object Cache. The Cache returns the response 'mpeg/logo.gif' to the Gateway, which then forwards it to the client. The diagram also shows the IP addresses of the other components: H2O Proxy (248), Service Platform (50), and Not Compiled Object Cache (1430). The timeline of the sequence is indicated by the numbers 212, 1520, 1522, 1530, 1526, and 1524.
